

General Design

Please see these original pages and use the abstract.html page as a model to create new pages. The new pages should have the same menu, logo, type style, links, metadata, Google Tag Manager and Analytics tags, images, descriptions, titles and alt image tags as they do on the original page whenever possible. The sequence of the images as they form the matrix should be random or based on the best way that the images fit together on the screen. See the animation on abstract.html and one another page, <https://esadigitalmedia.com/adobe-photoshop-illustrator.html>.

Original image files and their locations can be seen in the original website html for each page. Use the original image dimensions. Most images will have titles and descriptions. When there is no title or description specified, use the filename without the prefix as the title and leave the description blank. Image Alt tags should use the image title if one is given. If the image does not have a title, use the file name without the extension as the alt image tag when the alt image tag is not specified.

Each page will have a unique title and description. The title, description and keywords have been provided in the following pages. Use the same title for og:title and twitter:title and apply this idea to the description, url, site_name and image tags as shown in the example for the abstract.html page below.

Open graphics tags should follow this pattern:

<meta property="og:locale" content="en_US">
<meta property="og:type" content="website">
<meta property="og:title" content="Abstract ethanAart" />
<meta property="og:description" content="Abstract art by Ethan Altshuler created during his childhood">
<meta property="og:url" content="https://ethanaart.com/">
<meta property="og:site_name" content="ethanAart.com">
<meta property="og:image" content="https://ethanAart.com/images/og-color-logo-ethanaart.jpg" />

Metatags should follow this pattern:

<title> Abstract ethanAart </title>
<meta name="description" content=" Abstract art by Ethan Altshuler created during his childhood"/>
<meta name="keywords" content="abstract art, childhood" />
<meta name="robots" content="all, follow" />
<meta name="googlebot" content="index, follow, snippet, archive" />
<meta name="twitter:card" content="https://ethanAart.com/images/og-color-logo-ethanaart.jpg">
<meta name="twitter:title" content=" Abstract ethanAart ">
<meta name="twitter:url" content=" https://ethanaart.com/abstract.html"/>
<meta name="twitter:description" content=" Abstract art by Ethan Altshuler created during his childhood ">
<meta name="twitter:image" content=" https://ethanAart.com/images/og-color-logo-ethanaart.jpg"/>

The favicon for the site should be specified:

```
<link rel="shortcut icon" href="/favicon.ico"/>
```

These Google Tag Manager and Analytics tags should be applied to each page:

```
<script async src="https://www.googletagmanager.com/gtag/js?id=UA-130204150-1"></script>
<script>
  window.dataLayer = window.dataLayer || [];
  function gtag(){dataLayer.push(arguments);}
  gtag('js', new Date());

  gtag('config', 'UA-130204150-1');
</script>
```
